COMPLIANCE & REGULATORY

ENVIRONMENT OF CARE CONTROL (ROUNDING)

Environment of Care or Rounding is the INSIGHT (automation) service supporting a hospital's Care Environment (CE) Maintenance Policy. Its purpose is to ensure & give proof of a safe, functional and effective physical environment for patients, staff and visitors.

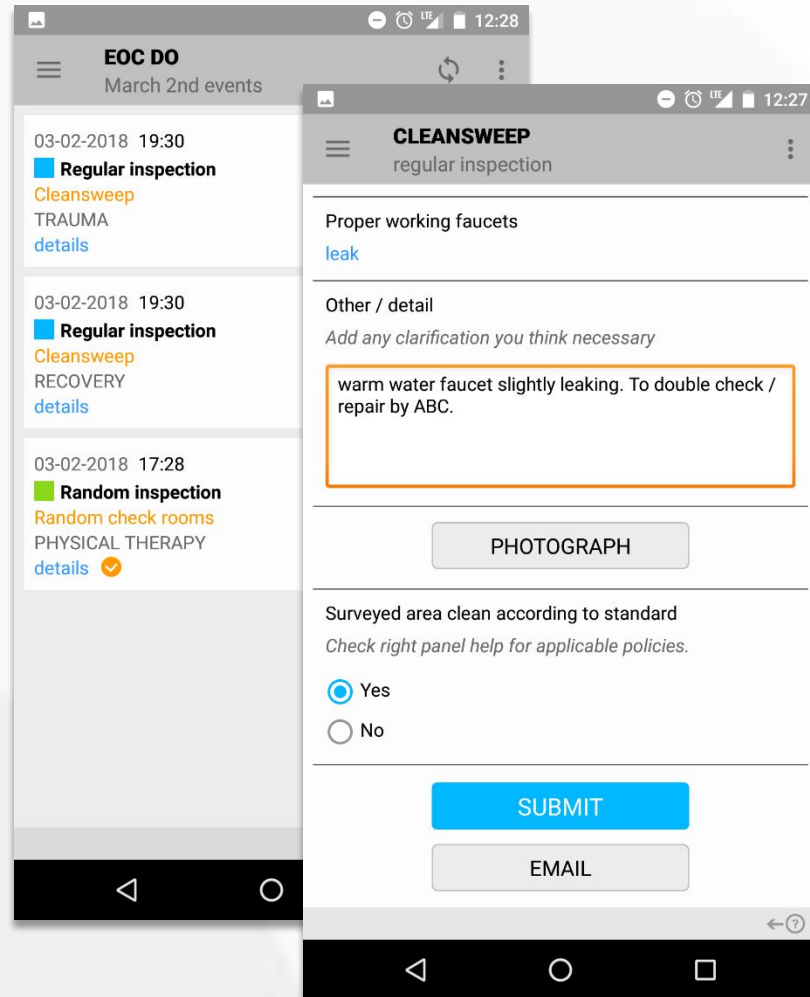

INSIGHT provides full workflow and information management support to meet EOC goals.

FEATURES

- ✓ Regulatory survey library
- ✓ Interactive questionnaire builder tool
- ✓ Inspection scheduler
- ✓ Push notifications
- ✓ Forcible auditor location presence
- ✓ Performance statistics
- ✓ (Auto) reporting

COMPLIANCE & REGULATORY

ENVIRONMENT OF CARE CONTROL (ROUNDING)

EOC revolves around doing “inspections”. Inspections surveys come predefined or can be custom built in any way you want and added to your systems form library. They can hold nonmandatory, single and multiple-choice questions, comment fields, photographs, self-defined help, context relevant auto notification, work-order generation and more.

Workflow execution in the system is done in 4 simple iterative steps. These steps are PLAN, DO, CHECK and ACT. Allowing you to always relate where you are and what you (should) do.

INSPECTIONS

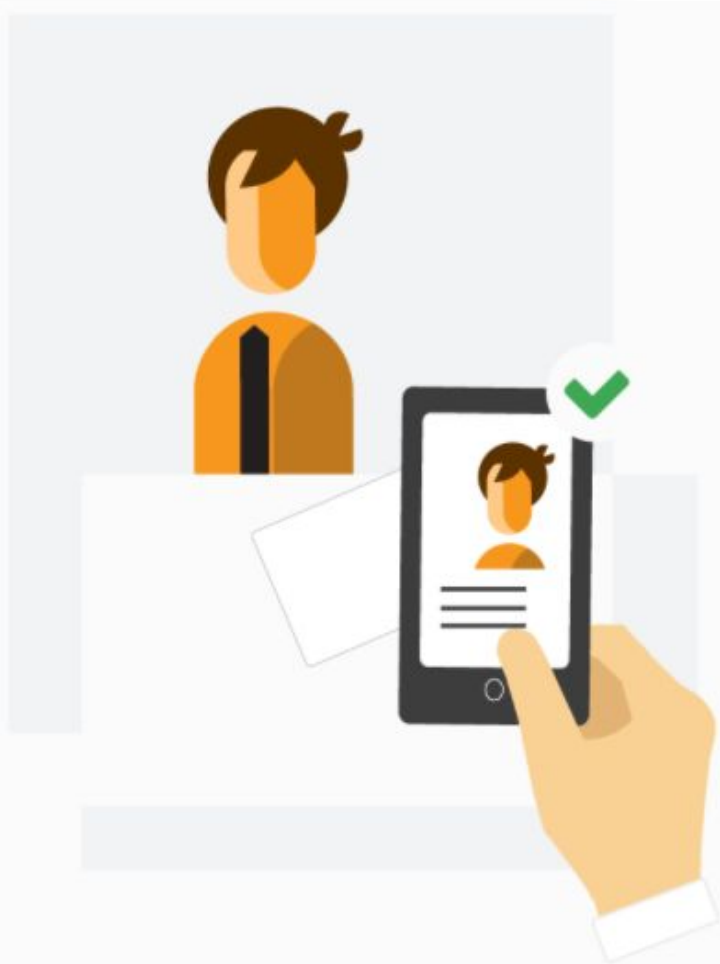

- ✓ Drive the Environment of Care process
- ✓ They come pre-defined or custom build
- ✓ Contain ability for auto notification and / or work order generation based on survey answers
- ✓ Are linked to specific inspection classifications
- ✓ Feed a repository allowing look-up, reporting and analysis

COMPLIANCE & REGULATORY

ENVIRONMENT OF CARE CONTROL (ROUNDING)

EOC offers the use of electronic location points that allows calling inspections on smartphone or tablet by a simple touch. The location points can additionally be set per survey to force staff to be present on the spot.

COMPLIANCE & REGULATORY

ENVIRONMENT OF CARE CONTROL (ROUNDING)

The EOC workflow is authorization based. All activities are performed by preset (system) roles.

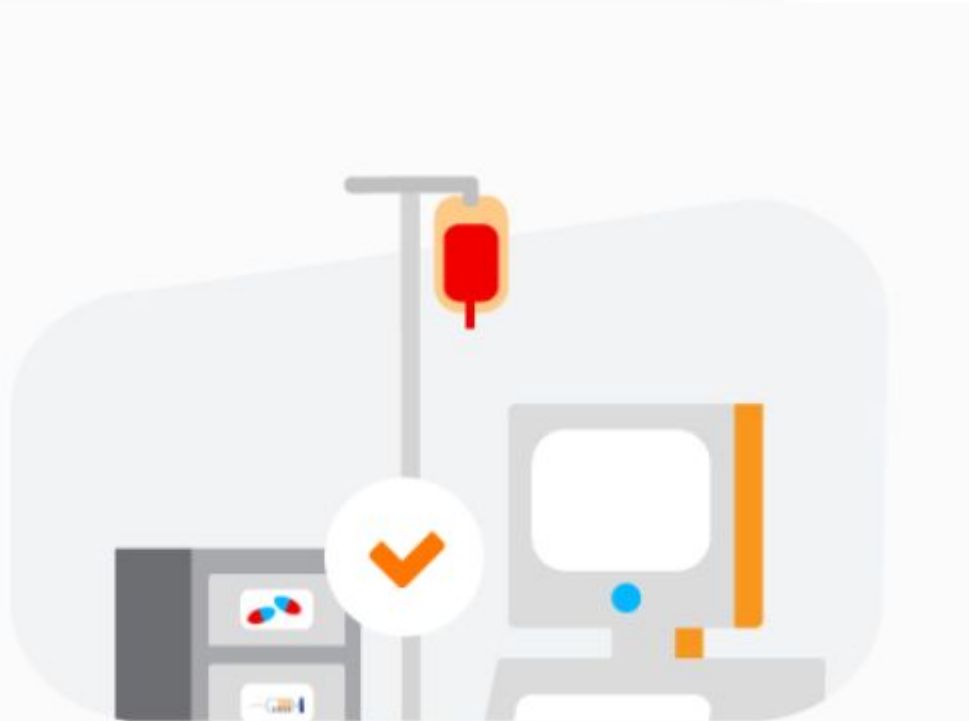

Each role has a different authorization profile determining their scope of work. Profiles determine what the user sees and can access within the system.

Preset roles can be copied and customized according to customer specific needs.

Authorization profiles again can be linked to an organizational structure to further manage responsibility, accountability, consultation and informing of co-workers.

COMPLIANCE & REGULATORY

ENVIRONMENT OF CARE CONTROL (ROUNDING)

The Environment of Care service allows you to:

Plan and organize the different Environment of Care checks you want to perform along organizational structure and user roles.

Execute planned regular, special and random inspections along scheduled date, time and location.

Verify and analyze results along automatically kept statics and predefined and/or user customizable reports.

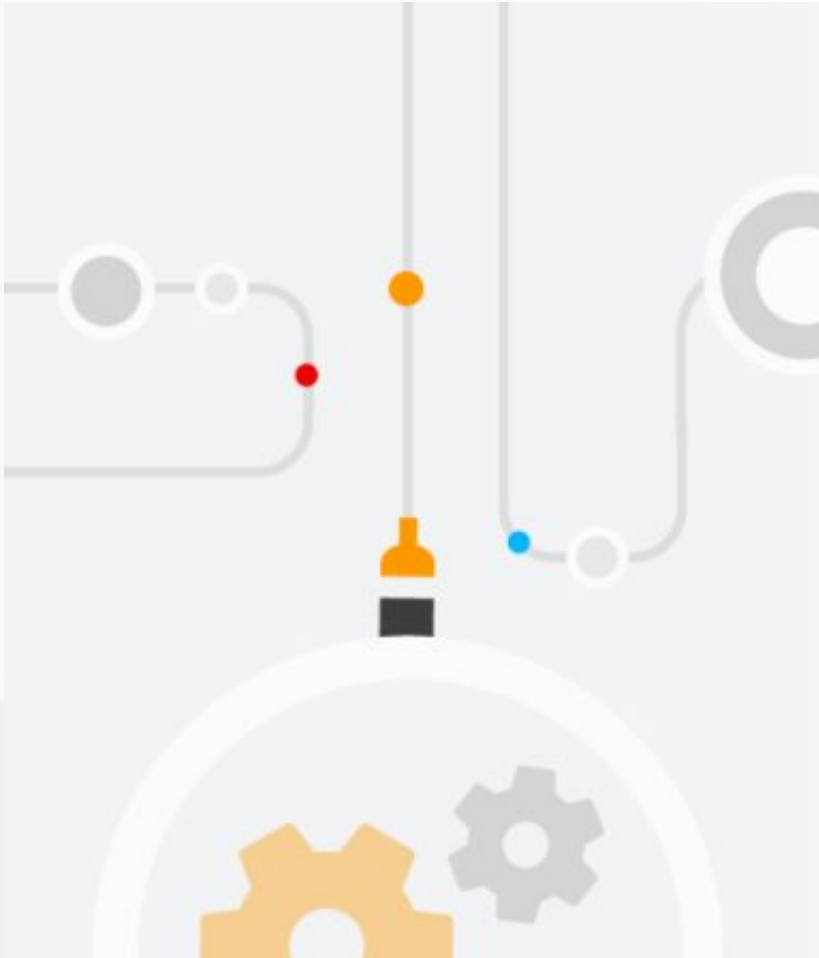

Act on any (auto notified) issues emerging from inspection results whilst keeping track of status and progress.

Share activities and findings with any internal or external participant through (pushed system notifications, email and/or text messages).

COMPLIANCE & REGULATORY

ENVIRONMENT OF CARE CONTROL (ROUNDING)

EOC is offered as a cloud based service and available through web and app*. It offers on the spot access and real-time processing of data and activities.

*Android currently. iOS planned.

Using Environment of Care services asks limited configuration and can be up and running almost on demand. You as customer have total freedom to deploy its features as you like.

EOC is part of the INSIGHT Location Intelligence platform. Offering a wide array of other (related) services and features. All of which can be used separate or in full (3d party) integration.

Environment of care is offered in in a Essentials, Professional and Premium package to support from simplest to most extensive needs.
